

Light Globe inside the World Networking Room

A light installation with *bedea* Light Nets symbolizes the world wide web around crystals and the Swarovski group

Upgrading the Swarovski "Crystal Worlds", the World Networking Room was added.

The center of this room is a globe with a total diameter of 4.5 ms.

While turning, the 4 elements – earth, fire, water, and air – appear, accentuated by coloured light. At the end of each turn, the light centers in the midst of the globe, forming the 5th element, the spirit.

The oceans are illuminated by *bedea* sidelight fibers, whereas landscapes are formed by sophisticated, 3-dimensional arrangements of *bedea* light nets, moulded in transparent plastics. Basically developed for wide-area-illuminations, the light net was used for the first time to figure complex objects such as the giant Himalaya mountains or the wide spread desert areas of the Sahara in a unique esthetical way.

This project could only be realized with the experiences of *bedea* in the field of fiber lighting systems.

6 DMX-light sources with colour changing modules, *bedea* optical fiber cables, *bedea* sidelight cables and last but not least app. 55 ms. of *bedea* light net, together with synchronized environmental effects (rotation of globe, light mood, sound, video) mediate an innovative, fascinating view about our „blue planet“ to the visitor.
